

### **AMENDMENTS TO THE SPECIFICATION**

**Please delete paragraph [0075] and replace the following therefor:**

[0075] As described above, although the patient server 1 stores the vital data for each of the IDs, the patient server 1 does not store the patient data corresponding to each of the IDs. Accordingly, if the patient ~~server~~server 1 were accessed without authorization, it would ~~not~~ be impossible to identify each of the vital data of a particular patient.
